

ELECTRIC FONDUE

With Touch Control

Temperature-precise, high-quality and safe

High-grade technology combines with contemporary design. This appealing electric fondue set convinces with the best interior and exterior values. This fondue with sensitive electronic temperature control achieves a very high temperature accuracy and therefore is ideal for all types of fondue: for fondue with oil and bouillon just as for a delicate cheese or chocolate fondue. There are three programmes to choose from, the temperature levels of which can be individually adapted. The operation via touch control sensors and the user-leading illumination care for a safe and easy handling. And also other than that safety is maximised. Subtle signal tones, an operation time limit, the residual heat indication as well as the safe combination of pot and electric hotplate leave nothing to be desired. Comfort even continues after enjoying the fondue: easy-care stainless steel and a coated heating plate make the afterwards cleaning a 'piece of cake'. This fondue will be the new star of our next fondue party!

Technical data:

- type: F 1200 • 230 V ~ 1200 W
- perfect for all kinds of fondue (chocolate, cheese, oil, bouillon)
- solid casing made of brushed stainless steel
- heating plate 175 mm Ø with easy-care non-stick coating
- operation panel for temperature regulation and control through convenient touch control sensors
- 3 programmes with electronic regulation, very high temperature accuracy (35 °C up to 190 °C)
- tested for safety: GS quality mark by TÜV SÜD
- high operational safety by overheating protection, signal tones and residual heat indication
- removable stainless steel pot with 2.5 litres volume (effective volume 1.2 litres)
- extra-long power cord, approx. 2 m
- stainless steel anti-splash insert with fork fixing, 6 stainless steel fondue forks with tags
