

Motion Premium

Ergonomic permanent hair reduction in just a flash

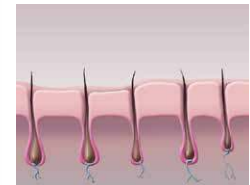

Undesired hairs won't stand a chance with Silk'n Motion Premium. This device makes hair removal sessions super easy and safe due to its patented Touch&Glide technology. This means that light pulses are emitted automatically without having to press a button. In this way, you can effortlessly glide the device over your skin in one simple movement. The ergonomically designed handle makes it comfortable to use as well. Its three sensors for Skin Colour, Touch, and Movement make treatments even more safe. Lastly, the special Auto Energy Adjust System protects the skin when it's too dark; the device will then automatically decrease the energy level. This way, you will never have to worry about using a level that's not suitable for your skin colour. So touch your skin, flash automatically, and let the Silk'n Motion Premium cease operation whenever you stop moving!

- Permanent hair reduction with HPL™ technology, clinically proven and patented
- Patented Touch&Glide technology: remove hairs more quickly thanks to automatic light pulse system
- With 3 sensors for Skin Colour, Touch, and Movement
- Safe for all skin colours, including darker tones, and almost all hair colours
- Auto Energy Adjust System: superior safety for darker skin tones
- Ergonomically designed handle for an improved grip
- Suitable for the whole body and the face
- Provides 600,000 light pulses
- With 5 energy levels
- Adjustable speed
- Treatment area: 3 cm²
- No refill cartridges necessary
- With Free Silk'n App to schedule treatments

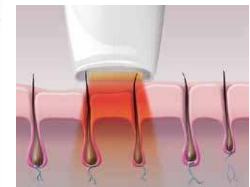

Safe Smooth Motion!

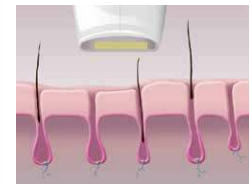

HPL™ technology

BEFORE HPL™ PULSE:
Healthy hair follicles with normal hair growth.

DURING HPL™ PULSE:
Optical Energy is selectively absorbed by the hair shaft.

AFTER HPL™ PULSE:
Optical Energy is absorbed by the hair follicles while the surrounding tissue remains at normal temperature. Hair removal is achieved.
