

New: FRITZ!Fon M3 Edition International

The Convenient Phone for Your FRITZ!Box

Dear business partner,

The new, versatile DECT phone FRITZ!Fon M3 with HD telephony and natural sound provides full-duplex hands-free calling for perfect voice quality. The clear 1.8-inch monochrome display and the illuminated keypad offer greatest operation convenience. With a long battery life, smart multimedia and control functions, plus excellent speech quality make the FRITZ!Fon M3 the perfect addition to the FRITZ!Box – be it in the office or for private home use.

Brilliant telephony with maximum flexibility

Multiple integrated answering machines with remote playback and email forwarding offer maximum flexibility. What's more, access to different FRITZ!Box phone books and online contacts simplifies organization. Thanks to convenient integration into the FRITZ!Box, all phone functions can be centrally controlled and easily managed.

Multimedia and smart phone always at hand

Beyond classic telephony functions, the FRITZ!Fon M3 is an all-round multimedia device: with an integrated media player and support for internet radio, podcasts, and music streaming, it offers a wide spectrum of entertainment options. At the same time, it makes controlling your smart home easy: smart home devices from FRITZ! such as radiator controls and sockets can be operated directly on the phone – for more everyday convenience and energy efficiency.

FRITZ!Box as the perfect base station

The FRITZ!Fon M3 is the perfect complement for all FRITZ!Box models with an integrated DECT base station – for DSL, fibre optic, cable or mobile internet. The FRITZ!Box puts all data services and convenience functions at your disposal for easy control on the user-friendly interface. All voice, audio, and control data are transferred in encrypted form via the DECT standard. When DECT Eco mode is enabled, the FRITZ!Box and the handsets turn off DECT radio transmission completely during standby operation – to maximize efficiency and security.
